
What will give the greatest benefit?

Meeting deadlines? More testing with existing resources?

Effective scheduling can get you the results you desire, but scheduling is a difficult task.

You spend hours planning a complex test flow. You found the available people and equipment. And then something changes.

So you reschedule. And sometimes you repeat that process again and again.

What is it worth to be able to move an entire test flow and have the system find the first available slots for the right equipment and people?

What is the value of:

- More tests with the same people and equipment
- Fewer mistakes
- Less management time chewed up manipulating schedules

QATrax's auto-scheduling tool is an industry first and can provide a great improvement in efficiency, accuracy, and control.

QATrax can significantly impact the effectiveness of your dynamic, complex test lab environment.

An Industry First

Auto-Schedule or Reschedule An Entire Test Flow All At Once

A great leap forward in test lab productivity

QATRAX
Test Lab Management
and Resource Scheduling

Seize Competitive Advantage

What is Auto-Scheduling?

QATrax auto-scheduling is the ability to move an entire sequence of tests, each with operator and equipment assignments, into a new time period, reassigning the tests to available workstations and people.

QATrax auto-scheduling makes a huge impact. Improvements can be measured in more actual test time by better resource utilization. Bottom line, more tests can be completed in a given time period.

With QATrax, gone are the days of manually manipulating the overall test lab schedules and the individual schedules of technicians and equipment. It is now easier to handle the domino effect of rescheduling one test flow that causes another unrelated test flow to be rescheduled.

Rescheduling has never been easier.

The Benefits of Auto-Scheduling

Test lab environments are very complex and dynamic. Constant changes in engineering and business requirements feed the inherent unpredictability of designing and developing products. Complexity and unpredictability multiplies with product and testing facilities scattered globally. Scheduling people and equipment against complex test flows is very difficult. Dynamic environments lead to the frequent, difficult and lengthy re-scheduling processes for complex test workflows.

Efficiency. Auto-Scheduling's clearest benefit is efficiency. The difficult work of shifting and adjusting multiple sets of tests to available time slots is handled for you. It leaves the lab manager more time to look at the broader view and ensure the adjusted schedule will work effectively. QATrax dramatically reduces the time taken for the total process.

Accuracy. Auto-Scheduling minimizes slip ups or schedule conflicts that require adjustments and changes down the road. QATrax results in fewer mistakes and fewer retests.

Control. Auto-Scheduling makes regaining control over test lab scheduling and time-lines possible. Evaluate multiple scenarios instead of taking the first solution that comes along. Adjust schedules to address lower priority tasks while still meeting higher priority targets. In short, with QATrax, order comes out of chaos.

Time. Efficiency + control = reclaimed time.

Reuse of test results. Increased accuracy and control may mean a greater ability to reuse test results.

Money. These benefits translate into reduced operating costs per test, greater operating efficiency and a better return on investment.

QATrax is the solution to visibility and effectiveness issues plaguing test labs. It provides proven productivity gains for organizations like Nokia, Motorola and HP.
