

Test Lab Management & Resource Auto-Scheduling

Product Data Sheet

QATrAX is designed specifically for the test lab environment, managing projects and test plans through the product lifecycle. It handles work requests, test equipment, personnel, equipment under test, test methods and test sequences. It is also designed to support quality standards including ISO 17025.

QATrAX provides managers, engineers and technicians with real-time visibility even into test labs dispersed around the world. It has a significant impact on the time it takes to get new products to market.

Resource management and scheduling

QATrAX 4.1 offers increased productivity with enhanced visibility of resource schedules. Automatically assigns equipment and operators based on availability! It handles the layering of projects over time, with both equipment and people assigned to activities.

Visually manage scheduled activities for test operators and equipment across all projects from a calendar, in lists or side-by-side resource displays.

Product Features

- **Auto-Scheduling & Re-Scheduling:** people, tests, equipment, events and other resources across multiple lab sites. Move an entire test flow with assigned equipment and operators to a different time period. System validates the availability of all resources and assigns new ones when necessary.
- **Compliance and quality:** ISO/QS compliance, document process, enforce and follow quality procedures
- **Metrics:** track time for tests and associated resources for billing and management metrics
- **Project management:** plan and schedule activity for all your projects, assign people and equipment, capture project information and actual course of events
- **Resource management:** test equipment, test operators and products to be tested
- **Multiple views:** view workflow by test lab site, by time, by equipment, by work order, by operator in multiple formats
- **Reporting:** query and summarize historical data associated with test, work order, operator, equipment
- **User configurable:** highly configurable, users determine relevant views
- **Real-time visibility:** access QATrAX worldwide, 24 hours a day via any internet-connected workstation
- **Central data repository:** N-Tier, lightweight client application, performance benefits and easy upgrades
- **Robust:** serves real-time global concurrent users, Internal and external to the lab
